MATILLION + dbt

Matillion + dbt: Transform data, exactly how you want it

Leverage Matillion's code-optional platform to orchestrate end-to-end ELT, while incorporating high-code dbt transformations, enabling data practitioners to use whatever development strategy they prefer directly within the Matillion Data Productivity Cloud.

What does Matillion + dbt do for you?

Loading and Orchestration

dbt lacks data loading and orchestration capabilities, causing users to rely on various additional tools, adding to tool spread and costs.

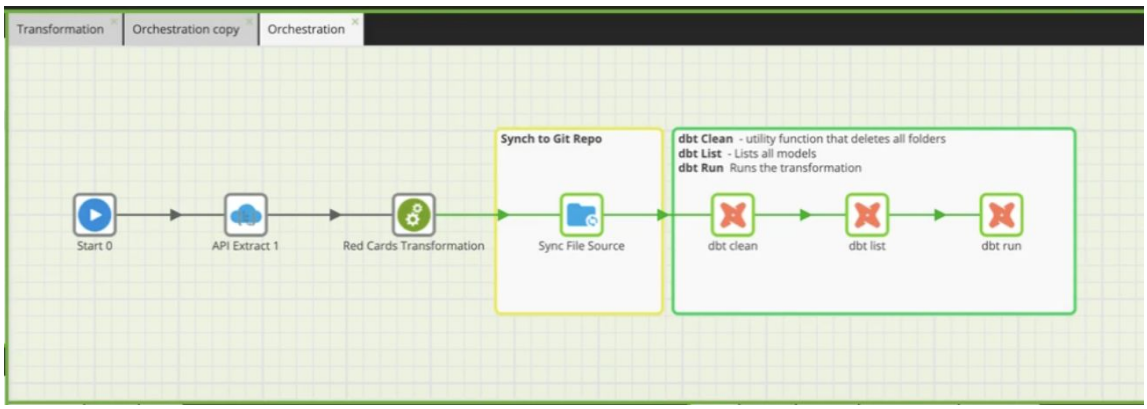

Scalability

Disparate, stand-alone tools aren't built for scale, incapable of supporting an organization's growing data needs.

Hiring Simplification

Technical coding methods and ETL tools require specialized skill-sets, making it difficult to build modern data teams with varying preferences.

Just as the data landscape is changing and growing, data teams are adapting to new tools and methods for writing code and delivering results.

Stack Ready

By enabling dbt users to use their own SQL code alongside complete ELT in Matillion provides a complete solution.

Everyone Ready

Data teams with different preferences are now influenced to work in unison with multiple transformation possibilities in varying frameworks.

Future Ready

By incorporating dbt into Matillion jobs, Matillion enables users to power their data needs for the future, for speed and for efficiency.
