MATILLION

Universal Connectivity for Matillion Data Loader

Universal Connectivity allows users to build custom connectors to any application with a REST API, removing the need to script complicated Python functions and expanding data's reach beyond a list of pre-built data sources.

What Universal Connectivity means to your data strategy:

Unlock Access

Universal Connectivity unlocks access to any application that has a REST API, expanding data's reach within the business.

Save Time and Resources

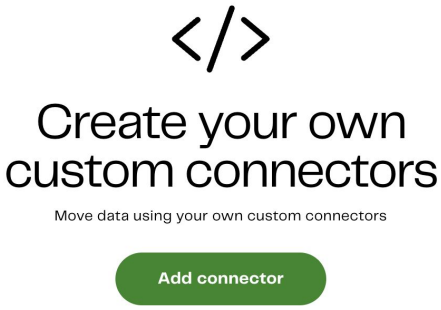

Universal Connectivity allows users to build data pipelines in a no-code fashion, without having to write any code.

Fully Managed

Designed using Universal Connectivity, custom connectors are managed and seamlessly integrated in Matillion Hub.

No data is out of reach with Matillion Data Loader's Universal Connectivity

The average organization uses 212 SaaS applications, the majority of them holding crucial business data. While Matillion has over 100 pre built connectors, users seek flexibility in building their own connectors to obtain full coverage.

Focus on more strategic initiatives

Without wasting time on building data pipelines

Expand hiring reach

When you are no longer confined by technical skill sets restricted by Python coding experience

Increase your data productivity

By reducing tool-spread and manual coding efforts
